TRAINING OBJECTIVES

This is an age of communication and the older methods of communication are becoming obsolete and newer & modern ones are continuously replacing them. One of such a modern communiqué is mobile communication. It has now become a necessity & has been enthusiastically adopted by the people throughout the world. The modern mass cannot think of life without this facility to connect with their family and friends at any time from any venue.

As a sequel of it being a necessity, it is absorbing more people into it than any other field of life these days. Now keeping in mind this fact, it is felt imperative to introduce some courses about mobiles.

Repairing of mobiles is one of such course, to produce skilled manpower, who will be able to carry out repair of the mobiles to enhance their life & to make them more useful. This curriculum of three months duration covers the usage of common hand tools, measuring instruments, usage of communication systems, faultfinding of mobile phones & their rectification, troubleshooting of software problems and upgrading of software version of handset independently to meet the need of job market.

CURRICULUM SALIENTS

Name of the Course
Entry Level

Mobile Phone Repairing
▪ Diploma of Associate Engineer in
Electronics / IT / CIT /
Telecommunication

OR

▪ G – II Level Course in Electrician /
Radio TV Electronics / Industrial
Electronics / Industrial Instrumentation &
Control

Duration of Course
Total Training Hours
Training Methodology

3 – Months (12 weeks)

400 Hours

Practical 80%

Theory 20%

Medium of Instruction

Urdu / English

SKILL PROFICIENCY DETAILS:

On successful completion of this course, the trainee should be able to:-

1. Apply the safety rules & precautions.
2. Describe the communication systems.
3. Explain the basic information about computer applications.
4. Define the basic concepts of wireless communication systems.
5. Define the wireless standards.
6. Describe the information about multiple access & GSM.
7. Express the concepts about basic networks like traffic / signaling, s. m card function & GSM channel types etc.
8. Express the repair of the mobiles.
9. Describe the troubleshooting of the hardware & software.
10. Describe the IMEI, unlock, sp lock, etc.

KNOWLEDGE PROFICIENCY DETAILS:

On successful completion of this course, the trainee should be able to:-

1. Work according to general workshop rules & regulations.
2. Use measuring instruments.
3. Use different communication systems like radio transmitter, radio receiver & wireless communication etc.
4. Operate the computers.
5. Operate different instruments like microscope, hot air gun & soldering station etc.
6. Find out faults in mobiles & to repair them.
7. Read the block diagrams of mobile sets.
8. Troubleshoot of different mobiles.
9. Troubleshooting of software problems.
10. Repair of IMEI.
11. Unlock the sp lock.
12. Upgrade software version of handsets.

SCHEME OF STUDIES
Mobile Phone Repairing
(3-Month Course)

S. No	Module	Hours	Practical	Total
1.	Fundamentals of Mobile Telephony	20	0	20
2.	Repair Methodology / Repair Technique	8	26	34
3.	Testing Method with Measuring Instruments	8	28	36
4.	Trouble Shooting	24	226	250
5.	I.T Fundamentals	4	16	20
6.	Functional English	15	25	40

LIST OF PRACTICALS

- Interpreting schematic drawing of simple electrical circuit.
- Practice of loose wiring on the following circuit.
- Identify inductor, capacitor, transformers, vacuum tubes, transistors and their symbols. Drawing of simple circuits using the symbols.
- Introduction of ammeter, voltmeter, wattmeter and multi-meter
- Measurement of current using ammeter
- Measurement of voltage using voltmeter
- Measurement of current, voltage and resistance using multi-meter
- Verification of Ohm's law.
 - I. Keeping the voltage constant.
 - II. Keeping the resistance constant.
- Verification of the laws of series and parallel combination of resistance by
 - I. Ohmmeter method.
 - II. Voltmeter – ammeter method.
- Verify kirchoff's laws.
- Measurement of power.
 - I. Voltmeter / Ammeter method.
 - II. Wattmeter.
- Practice of resistor color-coding.
- Identification of various types of capacitors and their color-coding.
- Determine the capacitance by using digital LCR meter
- Verify laws of combination of capacitor.
- Observe capacitor charging and discharging.
- Determine the inductance of a choke coil using LCR meter
- Familiarization with various type of transformers used in electric field
- Determine voltage and current ratio of a transformer
- Identification of diodes, transistors (BJT & FET) and their electrodes.
- Identification of various diodes, transistors and ICs (number system and terminals).
- Checking of junction diode and constructing a bridge rectifier.
- Study number system of diode and transistor using data books.
- Assembling a full wave diode rectifier with a filter.
- Demonstrate diode as a switch with LED as a load.

- Troubleshoot a faulty diode rectifier circuit.
- Assemble Zener diode as voltage regulator
- Assemble a power supply using IC regulator
- Usage of oscilloscope
- Observing sine wave on an oscilloscope and determine its
 - peak and peak-to-peak value
 - r.m.s and average value
 - Wavelength, time period and frequency
- Draw the Circuit diagram of half / full wave rectifier
 - Procedures of Booting.
 - Booting DOS,
 - Windows 3.X Boot Process,
 - Windows 95/98/XP Booting Process.
 - Configurations of Windows & adding Device Drivers.
 - Disk scanning through Scandisk utility
 - Identification of the elements of windows start-up screen.
 - Identification of the icons, bars and elements of explorer windows.
 - Use explorer to work in files and folders.
 - Using windows help.
 - Running application programs under windows.
 - Introduction to Dos Commands.
 - Installation of other peripheral devices.
 - Identify different IC packages.
 - Identification of TTL and CMOS families.
 - Pin configuration of TTL, NOT, OR, AND, NOR, NAND gates.
 - Pin identification CMOS, NOT, OR, AND, NOR, NAND gates.
 - Verification of truth tables two input / three input OR gate.
 - Verification of truth tables two input / three input AND gate.
 - Verification of truth tables NOT gate.
 - Verification of truth tables two input / three input NOR gate.
 - Verification of truth tables two input / three input NAND gate.
 - Conversion of NAND/NOR gates into NOT, OR, AND gates.
 - Development of OR and AND gate by using discrete components.
 - Build XOR and XNOR circuits using basis gates.

2.	Lamp 60w/200w	Each 6No,s
3.	Switch, show, 2 way switch, socket, Multi-pin socket, lamp holder	Each 25 No,s
4.	Copper coted Sheet 4'x4'	5 No,s
5.	PVC Board 7" x 4" with plastic plate and hole for 2switch, 1socket, 1socket multi-pin and 1 Lamp holder	25 No,s
6.	Resistor Different values	500 No,s
7.	Transformer 6v+6V, 220V input 3A	10 No,s
8.	Capacitor 1000uf /65v 100uf/35, 47uf/35V	Each 50 No,s
9.	Diode IN4004/4007	Each 100 No,s
10.	LED red, green, blue and multi colour	100 No,s Each
11.	Huck up wire (flexible)	5 coil
12.	Board marker	2 dozen
13.	Permanent Marker fine Tip	3 dozen
14.	Zener Diode 6V,9V,12V 2watt	Each 25 No,s
15.	Transistor C828,C1383,A684,2N3055	Each 25 No,s
16.	Variable Resistor 500 ohm and 1K Ω	Each 25 No,s
17.	etching material	2 Kg
18.	charging pin different model (for Available mobile in stock)	5 No,seach
19.	Antenna different model (for Available mobile in stock)	5 No,seach
20.	Microphone different model (for Available mobile in stock)	5 No,seach
21.	Speaker different model (for Available mobile in stock)	5 No,s Each
22.	Motherboard different model (for Available mobile in stock)	5 No,s Each
23.	LCD different model (for Available mobile in stock)	5 No,s Each
24.	Board Gripper OR JIGdifferent model (for Available mobile in stock)	5 No,s Each
25.	Soldering wire	5 No,s Each
26.	Car phone charger different model (for Available mobile in stock)	5 No,s Each
27.	contact cleaner	3 No,s
28.	De soldering paste (imported)	2 ten big
29.	USB Charging cable different model (for Available mobile in stock)	5 No,s Each
