PUNJAB BOARD OF TECHNICAL EDUCATION
TRADE TESTING CELL, LAHORE.

T.T.P. Series No.87

Price Rs. 30/-

EQUIPMENT AND COMPONENTS

- Jack plug for mono and stereo
- 5 pin plug:-
 - a) Forhead phone
 - b) For recording cable
- 2 core coaxial cable
- 5 core coaxial cable
- Single core coaxial cable
- Solder wire
- Solder flux
- Side cutter
- Insulation remover
- Solder iron
- Screw driver
- Plier

SEQUENCE OF OPERATION

- Remove outer insulation from cable.
- Separate the shield from conductor and twist it.
- Remove insulation from the conductor.
- Solder the ends of shield and conductor.
- Cut undesire length of conductors and shield.
- Open require plug.
- Solder ends of connection terminal.
- Solder of conductors and shield to proper pin of plug according to given terminal diagram.
- Fix and light pull relief properly on cable.
- Check continuity and shortage of terminal connections.
- Close plug with plug cover.

DIAGRAM

How a loudspeaker looks when taken a part for repair. The cone is glued to the front edge of the voice coil in an assembled speaker, and the dust cap of cover is glued over the hole in the cone.

SPEAKER TROUBLE

The three commonest types of troubles, you will encounter today in speakers are broken cones, Off-center voice coils, and dust in the air gap.

EQUIPMENT AND COMPONENTS

- Required parts of loudspeaker
- Glue
- Solder wire
- Solder flux

- Plier
- Soldering iron
- Screw driver
- Multi-meter

SEQUENCE OF OPERATION

FIND OUT THE FAULT OF LOUDSPEAKER

IF VOICE COIL IS DAMAGE

- Desolder the terminal of voice coil.
- Remove cone with dust cover and spider.
- Remove voice coil from the magnet.
- Prepare coil according to require size.
- Fix coil in to the magnet properly.
- Fix cone, spider and dust cover with glue.
- Solder the terminal of voice coil.
- Check function of loudspeaker.

IF CONE IS DAMAGE

- Remove cone from the frame of loudspeaker.
- Remove spider and dust cover from cone.
- Replace cone according to the size.
- Fix spider and dust cover with cone.
- Check function of loudspeaker.

EQUIPMENT AND COMPONENTS

- Mechanical system of cassette recorder
- Require parts if necessary
- Tool kit

SEQUENCE OF OPERATION

- Demount and mount key board.
- Demount and mount flywheel with capstan.
- Demount and mount pulleys.
- Demount and mount right and left hand spindles.
- Demount and mount rubber pressure roller.
- Demount and mount motor unit.

Trade Training III

EQUIPMENT AND COMPONENTS

- complete cassette recorder
- Carbon tetra-chloride
- Piece of cotton
- Soldering wire
- Cassette
- Tool kit
- Soldering iron
- Spirit
- Soldering flux

SEQUENCE OF OPERATION

- Remove front cover/cabinet of cassette recorder.
- Remove electrical connection of magnetic head.
- Demount play/record head in the cassette recorder.
- Make electrical connection of magnetic head.
- Clean head properly.
- Fix cassette in recorder.
- Bring cassette recorder in play position.
- Adjust play/record head by changing its position to get optimal sound.

Trade Training III

ADJUSTING OF HEAD

EQUIPMENT AND COMPONENTS

- Copper coating plate
- Material for etching
- Solder wire
- Solder flux
- Components according to given circuit
- Tool kit
- Soldering iron
- Drill machine
- Twist drill
- Hook up wire

SEQUENCE OF OPERATION

- Prepare printed circuit board.
- Prepare layout for placement of components.
- Drill holes in printed circuit board.
- Fix and solder components properly.
- Dress components properly.
- Check circuit visually according to given circuit diagram.
- Connect assembled circuit with cassette recorder.
- Check the function of assembled circuits.

EQUIPMENT AND COMPONENTS

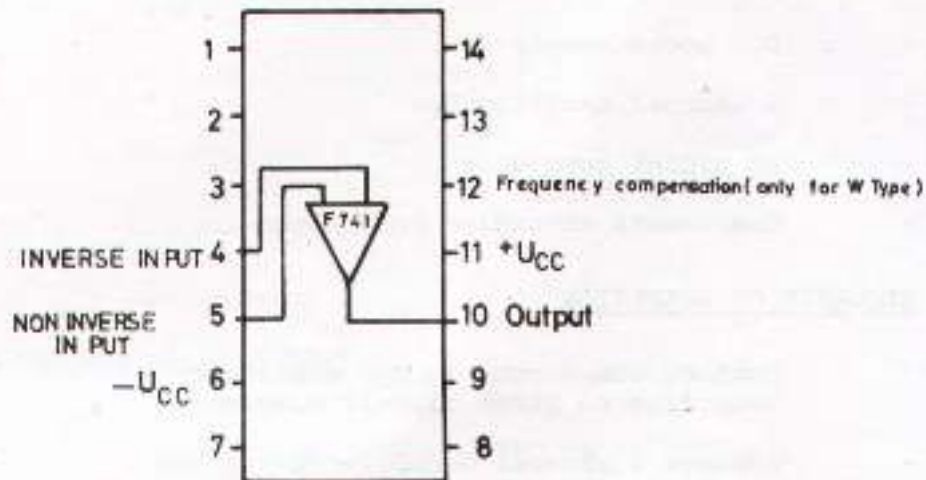

- D.C power supply
- 2 channel oscilloscope
- AF signal generator
- Components according to diagram

SEQUENCE OF OPERATION

- Connect components to O-P amplifier according to given circuit diagram.
- Connect 2 channel oscilloscope to the non inverse Input and Output of O-P amplifier.
- Apply D.C voltage to circuit according to given circuit diagram.
- Apply AC voltage $50\text{m V}_{\text{p-p}}/1\text{KHZ}$ from signal generator to the non inverse Input.
- Measure the Output voltage with oscilloscope by changing the feed back resistor and observe the phase position between Input and Output signal.
- Calculate amplification factor for each measured value.
- Repeat measuring process by using inverse Input of O-P amplifier.

EQUIPMENT AND COMPONENTS

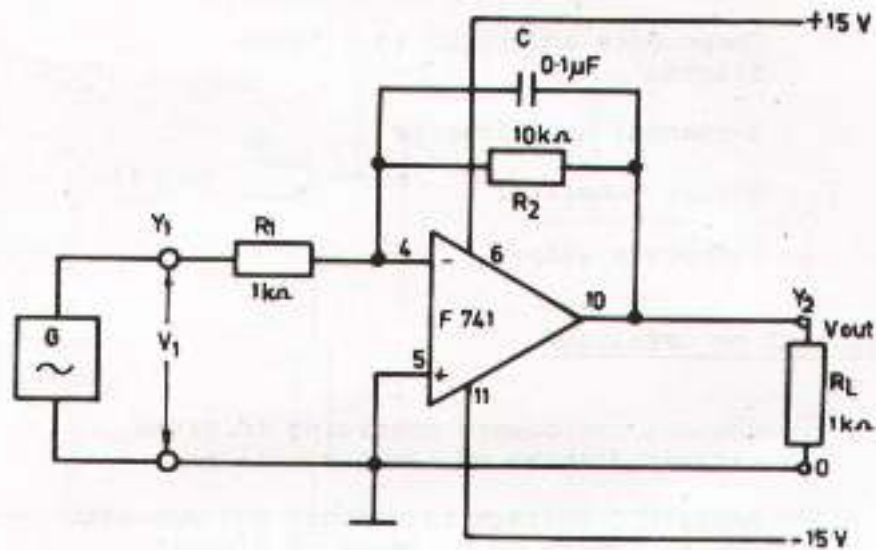

- Components according to circuit diagram
- 2-channel oscilloscope
- Signal generator
- D.C power supply

SEQUENCE OF OPERATION

- Connect components according to given circuit diagram of low pass filter.
- Apply D.C voltage to circuit and connect signal generator to Input of circuit.
- Connect 2-channel oscilloscope to Input and Output of circuit.
- Change Input frequency according to given values in the table and measure Output voltage by constant Input voltage.
- Draw graph of low pass filter, Output voltage depends upon frequency.
- Change connection of circuit from low pass to high pass filter.
- Repeat above mentioned measurements for high pass filter.
- Draw graph of high pass filter, Output voltage depends upon frequency.

 - Matrix and amplifier stage
 - Burst amplifier
 - Sub carrier oscillator
 - Colour killer circuit
 - Sync separator
 - Vertical section
 - Horizontal oscillator
 - Power supply
